

Clarent
Enterprise Solutions

voice, fax, data - one network.

What does every business in the world need to **succeed?**

Communications.

Businesses are always looking for the best communications technology to improve their competitive advantage. Today, businesses use various means of communications including telephone calls, FAX transmissions, E-mail, toll-free service, call centers and the Internet. The explosion of choices gives businesses more flexibility, but also increases the complexity and cost of managing communication networks.

Now you can take advantage of a new IP-based communication technology that combines voice, fax and data on a single, easy-to-manage network to help your business prosper.

Introducing Clarent's Internet Telephony **Enterprise Solutions**

Clarent's Internet Telephony Solution lets your business:

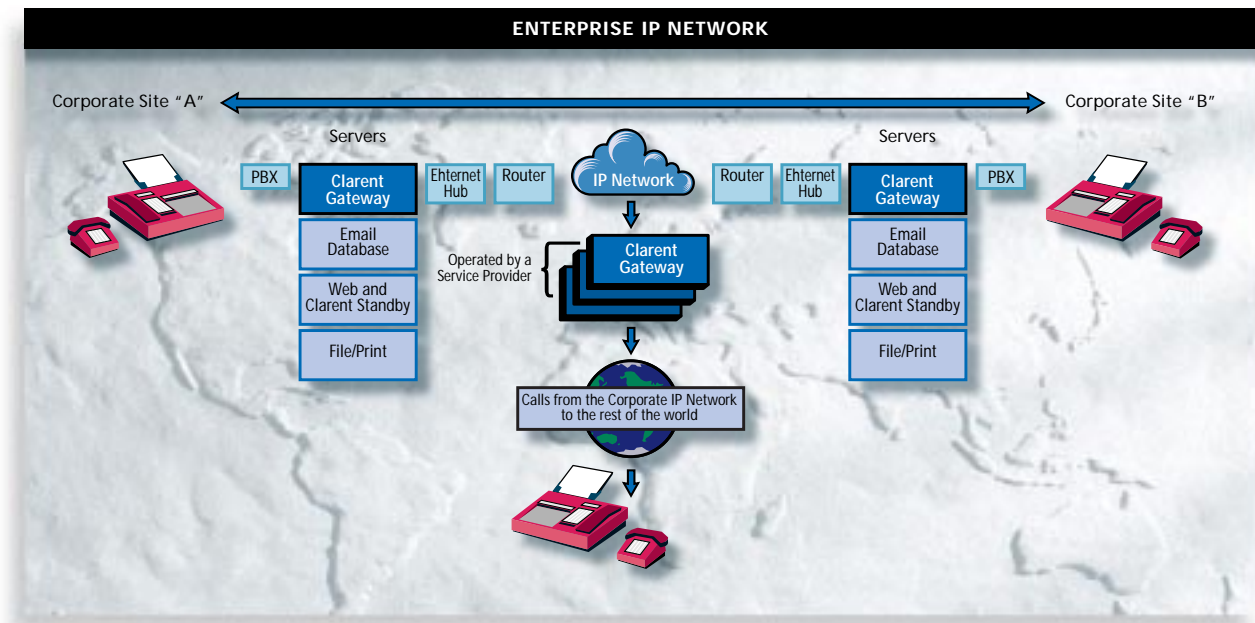

- **USE ITS EXISTING DATA NETWORK FOR TELEPHONE AND FAX CALLS BETWEEN CORPORATE SITES**
- **GREATLY REDUCE THE COST OF WORLDWIDE TELEPHONE AND FAX CALLS**
- **REVOLUTIONIZE TOLL-FREE AND CALL CENTER OPERATIONS BY USING THE IP NETWORK FOR INCOMING CALLS**
- **USE EMPLOYEE AND NETWORK RESOURCES MORE EFFICIENTLY BY CONSOLIDATING COMMUNICATIONS ON A SINGLE, IP-BASED NETWORK**

But it's not just about saving money. Companies need to take advantage of new technologies to operate more efficiently. Clarent's Internet Telephony solutions revolutionize business communications by using a single network to support voice, fax and data applications, giving you control of the tools necessary to communicate efficiently. Clarent solutions also integrate with your existing network infrastructure, making your communications tools even more effective, powerful and flexible.

Clarent Technology is Easy to Use

Your employees pick up the phone and dial, just as they always have. Then the call goes through one of your company's communications servers running the Clarent Enterprise Gateway software instead of through the Public Telephone Network. The gateway digitizes, compresses and sends the transmission in packets over an IP network to a receiving Clarent Enterprise Gateway. The gateway decompresses the transmission, and the call is completed to the destination telephone. Calls can be placed between multiple office locations or – through a service provider partner – to any telephone, anywhere in the world.

Clarent Enterprise Solutions

Integrated Clarent Enterprise Gateways use your existing server infrastructure to bridge the gap between voice and data networks and operate seamlessly between routers and PBXs. At the heart of your network are the servers that make communications possible – email, Web, customer databases. The Clarent Enterprise Gateway is part of the server infrastructure that drives your communications – as a stand-alone server or as a component of your existing servers.

Comprehensive Only Clarent provides the full range of communications tools you need to drive your business. Other solutions stop at point-to-point internal communications. Clarent's extensive network of service provider partners enable your business to use the IP network for external calls, Call Centers, and incoming toll-free service. Using Clarent Connect, your company can terminate traffic on service provider IP-based networks for calls going outside your business using the same, seamless process for your internal corporate calls. Clarent Enterprise Solutions supports all of your needs with a single, low-cost investment.

Easy to Manage Clarent Command Center and Route Manager provide a powerful range of centralized management capabilities designed to work with both small-scale and large global networks. Control your own network provisioning and utilization, while still terminating external voice and fax calls worldwide. Or, partner with a service provider for the complete, seamless operation of your network as part of a Virtual Private Network service. Either way, Clarent's Enterprise Solutions make it easy to manage everything including routing, egress to public networks and billing, call records, accounting codes, and network utilization.

Your Future Starts Now

Clarent is a proven technology that...

DRASTICALLY REDUCES EXPENSES

IMPROVES COMMUNICATION

GROWS WITH YOUR BUSINESS

CUSTOMIZES TO YOUR NETWORK

WORKS WITH FUTURE
MULTI-MEDIA APPLICATIONS

ALLOWS COST EFFECTIVE
COMMUNICATION BOTH WITHIN
AND OUTSIDE OF YOUR BUSINESS

In today's fast-moving, competitive environment, you need the best communication tools available. With Clarent's Internet Telephony Solutions, your business can communicate better, faster and smarter. By implementing Clarent's technology today, you are laying the foundation to build value-added services in the future.

When your business is ready to add applications such as multi-party videoconferencing or E-commerce, Clarent's forward-looking technology ensures you will have the bandwidth, server infrastructure and management tools in place to make it happen.

Your company's success depends on its ability to communicate effectively – both internally and with the outside world. With IP network technology and Clarent's Enterprise Solutions, your business will vastly improve its ability to communicate intelligently and efficiently by combining voice, fax and data – all on one network.

**Let Clarent bring
the future of communications to your business today!**
